

WEBVTT

1 "Mingchieh Wang" (2508059648)

00:00:03.225 --> 00:00:35.425

Okay. Can you see my screen ok? Yes. So today's agenda is review the new designs based on your comments last week. And please let me know what I'm missing and then have a questions from Jeff and me together and the 1st one is we actually update based on your feedback comments, right? The 1st thing is the switch hold, the massman.

2 "Raghu Chereddy" (2182419456)

00:00:35.425 --> 00:00:37.513

So rate one.

3 "Mingchieh Wang" (2508059648)

00:00:37.513 --> 00:00:53.765

So people know understand, ok, that's the hardline scope over there. And then we have a CPU average memory average CPU usage memory message. I pause here to digest.

4 "Raghu Chereddy" (2182419456)

00:00:53.765 --> 00:01:04.506

Just one question here. So the CPU memory, that averages are they calculated across the window that we are displaying here? Is that the average?

5 "Mingchieh Wang" (2508059648)

00:01:04.506 --> 00:01:06.740

You mean CPU or memory.

6 "Raghu Chereddy" (2182419456)

00:01:06.740 --> 00:01:10.046

Both both averages. Okay.

7 "Mingchieh Wang" (2508059648)

00:01:10.046 --> 00:01:11.327

So what's your question.

8 "Raghu Chereddy" (2182419456)

00:01:11.327 --> 00:01:19.423

Is that calculated across the, e.g., in this case 12 h window, is that the average of 12 h window?

9 "Mingchieh Wang" (2508059648)

00:01:19.423 --> 00:01:31.364

Okay, so, if this is a 12 h, it's definitely 12 h windows. Otherwise we need these descriptions on top say what is the unique?

10 "Raghu Chereddy" (2182419456)

00:01:31.364 --> 00:01:44.284

No, that is fine. So I'm just saying since it shows 12 h, it has to be 12 h window. If it lets say 1 h, if it shows 1 h, it should be the 1 h average.

11 "Mingchieh Wang" (2508059648)

00:01:44.284 --> 00:01:47.869

Yes I can put the notes note.

12 "Raghu Chereddy" (2182419456)

00:01:47.869 --> 00:01:52.441

Okay, I agree with that.

13 "Mingchieh Wang" (2508059648)

00:01:52.441 --> 00:02:04.387

And question here if there's a highlight here, should we over showing overall it will never showing up over the the number?

14 "Raghu Chereddy" (2182419456)

00:02:04.387 --> 00:02:21.884

It depends on how the system is configured. We have a feature called the safety barriers. Okay. If that is enabled, well actually it can go over that red line.

15 "Mingchieh Wang" (2508059648)

00:02:21.884 --> 00:02:33.786

So if let's go over the lines, people might ask you, ok, if there's a over the line is that trigger events or trigger alarms to like user know?

16 "Raghu Chereddy" (2182419456)

00:02:33.786 --> 00:02:49.349

There are already different set of alarms when we go over that threshold we are going to raise. So here what this means is when it goes over the red line, certain operations are restricted in the device on the device.

17 "Mingchieh Wang" (2508059648)

00:02:49.349 --> 00:02:52.546

Okay Rebe what's that on the device?

18 "Raghu Chereddy" (2182419456)

00:02:52.546 --> 00:02:56.183

Sudden operations are restricted on the device.

19 "Mingchieh Wang" (2508059648)

00:02:56.183 --> 00:03:00.442

Okay, user operations are restricted. Okay.

20 "Raghu Chereddy" (2182419456)

00:03:00.442 --> 00:03:06.051

That's a different feature and there is a sufficient documentation for that.

21 "Mingchieh Wang" (2508059648)

00:03:06.051 --> 00:03:17.208

So user will realize that they have to go to other page handle the situation or how does our workflows?

22 "Raghu Chereddy" (2182419456)

00:03:17.208 --> 00:03:20.966

I don't think we have a separate page for that.

23 "Mingchieh Wang" (2508059648)

00:03:20.966 --> 00:03:25.346

But what this means is that.

24 "Raghu Chereddy" (2182419456)

00:03:25.346 --> 00:03:42.489

Certain operations are restricted by the user which are documented in one of the either release I mean I'm not sure what documentation it is, customer facing documentation it is, but they are documented there. If it goes over the red line, what, what options are restricted? Okay.

25 "Mingchieh Wang" (2508059648)

00:03:42.489 --> 00:03:55.010

Will you mind to share my screens because we people might ask you whatever, they definitely go over the messments people will question for trouble troubleshooting.

26 "Raghu Chereddy" (2182419456)

00:03:55.010 --> 00:03:58.143

So this is 80 % not the maximum.

27 "Mingchieh Wang" (2508059648)

00:03:58.143 --> 00:03:59.548

This is.

28 "Raghu Chereddy" (2182419456)

00:03:59.548 --> 00:04:03.705

There are the basically below that is a safe operating zone.

29 "Mingchieh Wang" (2508059648)

00:04:03.705 --> 00:04:05.290

One.

30 "Raghu Chereddy" (2182419456)

00:04:05.290 --> 00:04:19.043

And when CPU or memory goes above that line, it is going to the system is going to deteriorate at that point of time certain operations are

restricted.

31 "Mingchieh Wang" (2508059648)

00:04:19.043 --> 00:04:29.130

Okay, if in this use case, we might using yellow, not the red one.

32 "Raghu Chereddy" (2182419456)

00:04:29.130 --> 00:04:31.386

Ah, say that again?

33 "Mingchieh Wang" (2508059648)

00:04:31.386 --> 00:04:51.647

Yes, in your situations, right? So we are allowed to go over, right? And then they will trigger the others continuing steps for troubleshooting. Therefore, for now we show using the yellow, not the red one. Otherwise people will question, ok, what happened next?

34 "Raghu Chereddy" (2182419456)

00:04:51.647 --> 00:04:56.802

Sure that is fine, ok? Okay.

35 "Mingchieh Wang" (2508059648)

00:04:56.802 --> 00:05:04.570

Oh, are we ok for the next one?

36 "Raghu Chereddy" (2182419456)

00:05:04.570 --> 00:05:14.162

Yeah, next one looks good. The number should represent how many events of that kind of has happened at that point of time. That's good.

37 "Mingchieh Wang" (2508059648)

00:05:14.162 --> 00:05:42.049

Okay, so now I'm going to work with you for hover and click events. Okay, so when users hover is option number one, current components using like this. So when you hover on the top because we wanted to continue connections in between so user hover on the top, it will show.

38 "Mingchieh Wang" (2508059648)

00:05:42.049 --> 00:05:59.729

The tooltip underneath them at the same time. But the problems here is people will come confuse because the two separate box and then display at the same time and they they only mouse hover for one.

39 "Mingchieh Wang" (2508059648)

00:05:59.729 --> 00:06:21.188

So this one will cause confusions. Therefore, we come with the other ones here, ok? We customize what we customize here is only the backgrounds underneath for 2nd chart, see? So they know ok there's a great box you hover and then show all of them together.

40 "Raghu Chereddy" (2182419456)
00:06:21.188 --> 00:06:24.066
Yeah, actually this looks better.

41 "Mingchieh Wang" (2508059648)
00:06:24.066 --> 00:06:53.884
Okay, so but the problems here is using my own questions hey I only have a top, why are you showing so many informations because on the top I only show memory and CPUs, right? So we come up with the 3rd options here. So we're using exactly the same box but vertical, so it will connect in between top and buttons people have a visually vertically online for both of them. So what do you think?

42 "Raghu Chereddy" (2182419456)
00:06:53.884 --> 00:07:06.331
Yeah, I mean either on the side by side or the vertical when both of them are good as long as since we are presenting the same data. Okay.

43 "Mingchieh Wang" (2508059648)
00:07:06.331 --> 00:07:17.630
Okay, I will confirm with see what components we can utilize for both of the vertical or horizontals.

44 "Raghu Chereddy" (2182419456)
00:07:17.630 --> 00:07:23.325
Yeah, I also have one comment here in the 1st case and the 1st block.

45 "Mingchieh Wang" (2508059648)
00:07:23.325 --> 00:07:25.726
Besides average.

46 "Raghu Chereddy" (2182419456)
00:07:25.726 --> 00:07:27.390
The CPU memory usage.

47 "Mingchieh Wang" (2508059648)
00:07:27.390 --> 00:07:28.089
Okay.

48 "Raghu Chereddy" (2182419456)
00:07:28.089 --> 00:07:38.241
There is some other data that also we need to show. We are not plotting on the graph. We don't need to, we don't want to plot that data.

49 "Mingchieh Wang" (2508059648)
00:07:38.241 --> 00:07:39.903
But route sent.

50 "Raghu Chereddy" (2182419456)

00:07:39.903 --> 00:07:46.040

Route received number of peers, that information also we have to show.

51 "Mingchieh Wang" (2508059648)

00:07:46.040 --> 00:07:59.211

Okay, questions so growth information belong to which category? Is it belong to CPU or it belong to memory or not belong to any of these?

52 "Raghu Chereddy" (2182419456)

00:07:59.211 --> 00:08:05.182

No, NO, so, ok. It will be part of the, it's not part of the memory or CPU.

53 "Mingchieh Wang" (2508059648)

00:08:05.182 --> 00:08:06.592

Oh, ok.

54 "Raghu Chereddy" (2182419456)

00:08:06.592 --> 00:08:17.883

If a user I mean, let's say basically you your user CPU or memory usage, any point there.

55 "Mingchieh Wang" (2508059648)

00:08:17.883 --> 00:08:18.650

I.

56 "Raghu Chereddy" (2182419456)

00:08:18.650 --> 00:08:33.948

We are showing average and instantaneous CPU memory usage. Along that, we also want to show how many routes were sent received at that point of time.

57 "Mingchieh Wang" (2508059648)

00:08:33.948 --> 00:08:58.619

I understand. So what I can do is I under here memory, under memory I will put something called orders, ok? Then put whatever you mentioned, put it over there. Do you think but I need a clear list what's the name and the numbers can you write it down for me? Because my English is not quite well. I might not type have a type typos here.

58 "Mingchieh Wang" (2508059648)

00:08:58.619 --> 00:09:16.949

Right. I will send you that information. Okay, could you please send me today and because I'm trying to set up meeting tomorrow or Thursday, ok? Okay, let's continue, so one questions from backends, so when users, right? It definitely triggered the tooltips.

59 "Mingchieh Wang" (2508059648)

00:09:16.949 --> 00:09:36.949

No problems and but what happened with the tables underneath? Because user might want to see, ok, they see 20 sevens, 25, sixteens, they they see these columns, right? They might click and then should we filter these columns, these 02:00.

60 "Mingchieh Wang" (2508059648)
00:09:36.949 --> 00:09:40.409
Information in the table.

61 "Raghu Chereddy" (2182419456)
00:09:40.409 --> 00:09:44.127
Yes. Okay, so.

62 "Mingchieh Wang" (2508059648)
00:09:44.127 --> 00:10:02.082
If they trigger, it definitely shows. What happened if by default they don't trigger anything by default are we show the average stuff for 12 h or what information we gonna display here?

63 "Raghu Chereddy" (2182419456)
00:10:02.082 --> 00:10:10.800
So, if a user doesn't select any doesn't click any time there.

64 "Mingchieh Wang" (2508059648)
00:10:10.800 --> 00:10:11.910
Yeah.

65 "Raghu Chereddy" (2182419456)
00:10:11.910 --> 00:10:27.005
I think show all events in the 12 h then in that row where there is search button and system IP, site ID, event type, user should be able to filter based on those filters.

66 "Mingchieh Wang" (2508059648)
00:10:27.005 --> 00:10:32.610
Okay, let me show you here. You mean this one here, right?

67 "Raghu Chereddy" (2182419456)
00:10:32.610 --> 00:10:41.769
Yeah, so the system IP, site ID, they can be also, it can be filtered based on those also.

68 "Mingchieh Wang" (2508059648)
00:10:41.769 --> 00:10:49.949
Okay, site ID timing, does the time is sensitive?

69 "Raghu Chereddy" (2182419456)
00:10:49.949 --> 00:10:58.090
We don't have a filter for time, but rather we have system IP and site ID.

70 "Mingchieh Wang" (2508059648)

00:10:58.090 --> 00:11:04.067

Sure, I can put those two. So these should be site IDs, right?

71 "Raghu Chereddy" (2182419456)

00:11:04.067 --> 00:11:08.666

Correct. Sure, give me a second.

72 "Mingchieh Wang" (2508059648)

00:11:08.666 --> 00:11:23.687

Okay, next question is, I only show control connection policies and OMP three options three objects here. What else I can put it underneath for a few that's enough.

73 "Raghu Chereddy" (2182419456)

00:11:23.687 --> 00:11:26.104

We have we will have only three event types.

74 "Mingchieh Wang" (2508059648)

00:11:26.104 --> 00:11:32.285

Okay. Oh, but different IP and different site ID.

75 "Raghu Chereddy" (2182419456)

00:11:32.285 --> 00:11:42.649

Correct yeah there will be a different site ID, different system IP. Okay, different time. Sure.

76 "Mingchieh Wang" (2508059648)

00:11:42.649 --> 00:11:51.751

I, I can make it up, NO problems. Okay, any questions before I move on?

77 "Raghu Chereddy" (2182419456)

00:11:51.751 --> 00:11:55.109

No, I'm it looks good so far, so far good.

78 "Mingchieh Wang" (2508059648)

00:11:55.109 --> 00:12:32.024

The next question is what happen if user click device detail? Okay, we have two options here. See, 1st options will be exactly same as events. So user go to the events, right? They click the device, they see the sidebars coming up and then they will show, ok, what's the router's router received OMP CC appliance, things like that. So we wanted to have the same patterns people can recognize or we can have a pop up windows like this.

79 "Raghu Chereddy" (2182419456)

00:12:32.024 --> 00:12:53.155

I don't have any preference as long as we show the data that is shown,

that is shown here, routes and received uptime and CC uptime and OMP uptime. That's the that's the important part we need to show. How do we show, I mean you can decide on that part.

80 "Mingchieh Wang" (2508059648)

00:12:53.155 --> 00:13:06.105

Okay, a US suggestion will be using the sidebar because on here they click and they can compare, they have two side by side comparison comparisons.

81 "Raghu Chereddy" (2182419456)

00:13:06.105 --> 00:13:19.142

Okay, I don't know what is a better one maybe you can check with Jeffrey on that. How do we show the data or even better the someone from PLM? Okay.

82 "Mingchieh Wang" (2508059648)

00:13:19.142 --> 00:13:36.839

Sure sure sure. I will do. So question here the information is nothing. I need your help to put some dummy data and check if the title is correct or anything else I need to put I need to any other topic I need to put in here.

83 "Mingchieh Wang" (2508059648)

00:13:36.839 --> 00:13:44.493

Because it it looks like missing data.

84 "Raghu Chereddy" (2182419456)

00:13:44.493 --> 00:13:50.147

Oh, I think that's, would you like to join this meeting now?

85 "Mingchieh Wang" (2508059648)

00:13:50.147 --> 00:13:50.789

Okay.

86 "Raghu Chereddy" (2182419456)

00:13:50.789 --> 00:13:55.331

Just hold on for a second and let me move to a different row.

87 "Mingchieh Wang" (2508059648)

00:13:55.331 --> 00:14:04.121

Oh, ok. Sure. Take your time.

88 "Raghu Chereddy" (2182419456)

00:14:04.121 --> 00:14:22.591

Okay. Yeah, so sorry about that. Yeah. Okay here routes send and received are just pure numbers, integer numbers.

89 "Mingchieh Wang" (2508059648)

00:14:22.591 --> 00:14:26.405

Integer numbers like a, like a 77.

90 "Raghu Chereddy" (2182419456)

00:14:26.405 --> 00:14:31.746

Yeah, 70. No, not percent, just number just a number.

91 "Mingchieh Wang" (2508059648)

00:14:31.746 --> 00:14:35.124

Okay? And was docker receipt.

92 "Raghu Chereddy" (2182419456)

00:14:35.124 --> 00:14:37.508

Same thing just just a number.

93 "Mingchieh Wang" (2508059648)

00:14:37.508 --> 00:14:44.357

40? Yeah. Okay. And then what is the o o OMP?

94 "Raghu Chereddy" (2182419456)

00:14:44.357 --> 00:14:47.643

This is the actual time.

95 "Mingchieh Wang" (2508059648)

00:14:47.643 --> 00:14:53.408

You mean, can you, can you.

96 "Raghu Chereddy" (2182419456)

00:14:53.408 --> 00:15:16.350

So, how does this look like? So this is the time when the device was up. Basically, it would be year date, year month date.

97 "Mingchieh Wang" (2508059648)

00:15:16.350 --> 00:15:22.691

Year, months, day? Okay. And also.

98 "Raghu Chereddy" (2182419456)

00:15:22.691 --> 00:15:27.487

Hours and seconds.

99 "Mingchieh Wang" (2508059648)

00:15:27.487 --> 00:15:50.787

Time? Okay last so M AR years, years will be months and day, ok? And then AA9 ten.

100 "Raghu Chereddy" (2182419456)

00:15:50.787 --> 00:16:00.650

Yeah, 09:10, something like that 09:10, yeah am. Yes. Okay, sure. I think there is a seconds also in that, but I will confirm.

101 "Mingchieh Wang" (2508059648)

00:16:00.650 --> 00:16:07.327
Okay, it will be earlier or later than this time.

102 "Raghu Chereddy" (2182419456)
00:16:07.327 --> 00:16:11.226
It would be earlier compared to OMP uptime.

103 "Mingchieh Wang" (2508059648)
00:16:11.226 --> 00:16:13.667
Okay, it's like three three.

104 "Raghu Chereddy" (2182419456)
00:16:13.667 --> 00:16:16.126
Yeah, sure, yeah. Okay, sorry.

105 "Mingchieh Wang" (2508059648)
00:16:16.126 --> 00:16:24.710
That's good. Any other topic should go here?

106 "Raghu Chereddy" (2182419456)
00:16:24.710 --> 00:16:27.069
A number of peers.

107 "Mingchieh Wang" (2508059648)
00:16:27.069 --> 00:16:31.841
Number of P E R P.

108 "Raghu Chereddy" (2182419456)
00:16:31.841 --> 00:16:35.808
Number of or you can say number of devices.

109 "Mingchieh Wang" (2508059648)
00:16:35.808 --> 00:16:43.045
Okay, number of device, let me type here, like this.

110 "Raghu Chereddy" (2182419456)
00:16:43.045 --> 00:16:46.687
Yes, device count. Okay.

111 "Mingchieh Wang" (2508059648)
00:16:46.687 --> 00:16:54.310
I just put it here. I I I put it but so device will be how many?
Three?

112 "Raghu Chereddy" (2182419456)
00:16:54.310 --> 00:16:59.169
No, just a number. It could be any number, it's a.

113 "Mingchieh Wang" (2508059648)
00:16:59.169 --> 00:17:20.067

Okay, I put it, I put it back later like like this ok yeah something device is with ACE, right?

114 "Raghu Chereddy" (2182419456)
00:17:20.067 --> 00:17:21.310
Correct.

115 "Mingchieh Wang" (2508059648)
00:17:21.310 --> 00:17:34.805
Okay, what else?

116 "Raghu Chereddy" (2182419456)
00:17:34.805 --> 00:17:40.172
I think that's it. Sure.

117 "Mingchieh Wang" (2508059648)
00:17:40.172 --> 00:17:55.265
I will ok next questions is here. So per Jeff, this is controllers, right?

118 "Raghu Chereddy" (2182419456)
00:17:55.265 --> 00:17:56.729
Right.

119 "Mingchieh Wang" (2508059648)
00:17:56.729 --> 00:18:14.142
The items values key pair is not going to show us up, but I cannot tell, I need your help to put a comments here saying hey me, this should be what? This should be should be nothing or should we I need help with check with those.

120 "Raghu Chereddy" (2182419456)
00:18:14.142 --> 00:18:29.461
Okay, so health we are not calculating now, that is it's not here that's not applicable now. We have to take that out or just to put it as not applicable, that will be coming in the future releases.

121 "Mingchieh Wang" (2508059648)
00:18:29.461 --> 00:18:34.649
What else?

122 "Raghu Chereddy" (2182419456)
00:18:34.649 --> 00:18:35.323
Now.

123 "Mingchieh Wang" (2508059648)
00:18:35.323 --> 00:18:42.203
Reboot.

124 "Raghu Chereddy" (2182419456)

00:18:42.203 --> 00:18:53.348

It's not specific to V smart insights or vsmart health. That might be coming from somewhere else.

125 "Mingchieh Wang" (2508059648)

00:18:53.348 --> 00:18:56.127

You mean this one here? Correct, it is.

126 "Raghu Cherreddy" (2182419456)

00:18:56.127 --> 00:19:00.281

It's not it's not related to the feature we are developing.

127 "Mingchieh Wang" (2508059648)

00:19:00.281 --> 00:19:08.228

Okay, I just put notable. Yeah. Sure. How about crash?

128 "Raghu Cherreddy" (2182419456)

00:19:08.228 --> 00:19:12.927

Same thing. Is it something already existing or?

129 "Mingchieh Wang" (2508059648)

00:19:12.927 --> 00:19:33.506

This because this is a template for all of the device in case people have a CAKB gen one gen two, they they they they need those informations. So anything sees not applied, we we just we just we just have nothing.

130 "Raghu Cherreddy" (2182419456)

00:19:33.506 --> 00:19:38.791

If it is C eight KB that's a device, so we don't need that one here.

131 "Mingchieh Wang" (2508059648)

00:19:38.791 --> 00:19:41.027

Oh ok. I see.

132 "Raghu Cherreddy" (2182419456)

00:19:41.027 --> 00:19:46.785

This is a controller. Okay, I see.

133 "Mingchieh Wang" (2508059648)

00:19:46.785 --> 00:19:56.329

How about CPU loads? Does the CPU loads should be match the number with here?

134 "Raghu Cherreddy" (2182419456)

00:19:56.329 --> 00:20:01.769

We can match with average CPU and average memory.

135 "Mingchieh Wang" (2508059648)

00:20:01.769 --> 00:20:10.088

How how can I tell what show I really have these lots of a number? I don't know what number I should go through.

136 "Raghu Chereddy" (2182419456)

00:20:10.088 --> 00:20:11.908

Here, average.

137 "Mingchieh Wang" (2508059648)

00:20:11.908 --> 00:20:18.569

Okay, so it will be average. Correct.

138 "Mingchieh Wang" (2508059648)

00:20:18.569 --> 00:20:43.707

Okay, and same here yeah ok I love I love backend notes again was modules here? Module is vsmart. Okay, are we using vsmart or controller? Because controller. Okay, come, like this.

139 "Raghu Chereddy" (2182419456)

00:20:43.707 --> 00:20:44.930

Yeah.

140 "Mingchieh Wang" (2508059648)

00:20:44.930 --> 00:20:50.844

Okay, next one, controller connections. Do we have this one?

141 "Raghu Chereddy" (2182419456)

00:20:50.844 --> 00:21:02.324

No, everything here is not applicable.

142 "Mingchieh Wang" (2508059648)

00:21:02.324 --> 00:21:36.859

Everything's not, ok. I just removed everything, ok? Yeah. Okay ok watch on top host names, IDs, upsinks went, room points tag.

143 "Mingchieh Wang" (2508059648)

00:21:36.859 --> 00:21:57.250

Are you still tracking?

144 "Raghu Chereddy" (2182419456)

00:21:57.250 --> 00:21:59.551

Oh sorry is there a question.

145 "Mingchieh Wang" (2508059648)

00:21:59.551 --> 00:22:04.667

Yeah, yeah, lots of questions I need could you please go over those?

146 "Raghu Chereddy" (2182419456)

00:22:04.667 --> 00:22:17.605

No, NO. Host name is good. Version is good, site ID, system IP ups since time zone location, chassis number ID, you know, that's only specific

to the device.

147 "Mingchieh Wang" (2508059648)

00:22:17.605 --> 00:22:33.051

Okay, yeah. No, NO trustee IDs, NO, models, right? It's not ideal yeah serious number because it's not even a device, so I will say NO.

Right, yeah. Connections.

148 "Raghu Chereddy" (2182419456)

00:22:33.051 --> 00:22:36.099

So that also we can just remove that.

149 "Mingchieh Wang" (2508059648)

00:22:36.099 --> 00:22:38.568

Okay, how about text?

150 "Raghu Chereddy" (2182419456)

00:22:38.568 --> 00:22:41.634

Just remove that.

151 "Mingchieh Wang" (2508059648)

00:22:41.634 --> 00:22:54.204

I'm not sure if I can remove. I need to check with the front engineer or otherwise I will just put not apply. Okay, questions for you hold on hold on.

152 "Raghu Chereddy" (2182419456)

00:22:54.204 --> 00:22:57.787

The site ID is also not applicable.

153 "Mingchieh Wang" (2508059648)

00:22:57.787 --> 00:23:02.109

But you say ID site ID here. Did you see?

154 "Raghu Chereddy" (2182419456)

00:23:02.109 --> 00:23:10.589

No, they are coming from the devices. This is the controller itself does not have a site ID. Okay.

155 "Mingchieh Wang" (2508059648)

00:23:10.589 --> 00:23:24.128

The good catch. Do they have an address here?

156 "Raghu Chereddy" (2182419456)

00:23:24.128 --> 00:23:40.389

He should actually select if you have vmanage. Under devices select the controller and see what they are actually showing. Here you have picked a device CG 113.

157 "Mingchieh Wang" (2508059648)

00:23:40.389 --> 00:23:45.682

I'm not following, can you help me which file mentions?

158 "Raghu Chereddy" (2182419456)

00:23:45.682 --> 00:23:53.305

So the information that is shown here is specific to the devices.

159 "Mingchieh Wang" (2508059648)

00:23:53.305 --> 00:23:55.582

Controllers.

160 "Raghu Chereddy" (2182419456)

00:23:55.582 --> 00:24:11.168

I see. So from the dropdown above, if you select the controller, it will, there will be different information here.

161 "Mingchieh Wang" (2508059648)

00:24:11.168 --> 00:24:22.570

I see. So I see. So I'm gonna to remove lots of locations address only leave whatever's left, I see.

162 "Raghu Chereddy" (2182419456)

00:24:22.570 --> 00:24:38.842

Yeah, I would suggest if you have access to the vmanage, take a look under devices dropdown. If you select controller, what actually is shown here? That is the information we have to show.

163 "Mingchieh Wang" (2508059648)

00:24:38.842 --> 00:24:48.344

It could be different. Can, can you share the screen and bring me over there? I.

164 "Raghu Chereddy" (2182419456)

00:24:48.344 --> 00:24:52.288

I need I don't have with me V manage access.

165 "Mingchieh Wang" (2508059648)

00:24:52.288 --> 00:24:56.333

Okay, who is the best person still asking?

166 "Raghu Chereddy" (2182419456)

00:24:56.333 --> 00:24:59.844

Check with.

167 "Mingchieh Wang" (2508059648)

00:24:59.844 --> 00:25:03.808

Akshack L Falgon.

168 "Raghu Chereddy" (2182419456)

00:25:03.808 --> 00:25:08.290

They are from the PLM team, product management.

169 "Mingchieh Wang" (2508059648)

00:25:08.290 --> 00:25:17.666

Okay, so can you describe the sentence one? What should I asking? So, provide.

170 "Raghu Chereddy" (2182419456)

00:25:17.666 --> 00:25:25.306

So, the information, if you go back to the previous screen that you shared.

171 "Mingchieh Wang" (2508059648)

00:25:25.306 --> 00:25:31.225

Apologizes for moving. Okay, I will be here. Yeah.

172 "Raghu Chereddy" (2182419456)

00:25:31.225 --> 00:25:37.988

So for the controller what should be shown under information status and control?

173 "Mingchieh Wang" (2508059648)

00:25:37.988 --> 00:25:53.348

Okay, more information is supposed to because here provide controllers. Okay, sure. Okay. Can I move on?

174 "Raghu Chereddy" (2182419456)

00:25:53.348 --> 00:25:55.125

Sure. Thank you.

175 "Mingchieh Wang" (2508059648)

00:25:55.125 --> 00:26:29.789

So this is a new request for the scopes, right? I remember some people mentioned they wanna have OMP charts on this homepage and then for Jeff Jeff mentions because it is very smart, it's not a device so we only keep CPU memory and OMP. My problem is I don't know what exactly exactly data I need to show for the OMP.

176 "Raghu Chereddy" (2182419456)

00:26:29.789 --> 00:26:36.107

So OMP just show CPU and memory usage.

177 "Mingchieh Wang" (2508059648)

00:26:36.107 --> 00:26:38.429

See CPU memory is already here.

178 "Raghu Chereddy" (2182419456)

00:26:38.429 --> 00:26:42.247

No, that's the whole system wide.

179 "Mingchieh Wang" (2508059648)

00:26:42.247 --> 00:26:56.070

Okay, so if I have OMP and then showing CPU and memory, people will be confused, see CPU on the top CPU here. So how can I have a description so let people know this is separate?

180 "Mingchieh Wang" (2508059648)

00:26:58.429 --> 00:27:00.615

Because I'm confused too.

181 "Raghu Chereddy" (2182419456)

00:27:00.615 --> 00:27:10.909

Sure yeah who wanted to show here OMP CPU memory?

182 "Mingchieh Wang" (2508059648)

00:27:10.909 --> 00:27:34.948

You mean this one and this one that was Jeff. Jeff was questions. He asked me to confirm with you, should we keep CPU or memory here? But my suggestion will be, the naming convention is complete actually duplicate people will be confused. That's why I need to confirm.

183 "Raghu Chereddy" (2182419456)

00:27:34.948 --> 00:27:37.729

I'm not so sure if it goes here.

184 "Mingchieh Wang" (2508059648)

00:27:37.729 --> 00:27:41.942

Even though Jeffrey said.

185 "Raghu Chereddy" (2182419456)

00:27:41.942 --> 00:27:48.822

I think the people who can actually confirm this one would be again Falgun and Akshay.

186 "Mingchieh Wang" (2508059648)

00:27:48.822 --> 00:28:00.481

Okay. Sure. Sure. You do you remember in last meeting, who is the person's asking for this?

187 "Raghu Chereddy" (2182419456)

00:28:00.481 --> 00:28:05.829

Akshay I think. Okay, it was it was actually ok I'll check with him.

188 "Mingchieh Wang" (2508059648)

00:28:05.829 --> 00:28:35.159

Thank you. Anything else? I think it's we good for now. Oh, there's a few questions from Jeff I wanted to go over with you follow with me. So Jeff was mentioned, take a look. Is there any Do we actually need to show system IP here? That was his questions.

189 "Raghu Chereddy" (2182419456)

00:28:35.159 --> 00:28:41.521

Yeah, I think we need that one. Both system IP and site ID.

190 "Mingchieh Wang" (2508059648)

00:28:41.521 --> 00:28:44.231

Okay you repeat Both four or for both.

191 "Raghu Chereddy" (2182419456)

00:28:44.231 --> 00:29:01.069

We need both system IP and site ID. Okay.

192 "Mingchieh Wang" (2508059648)

00:29:08.415 --> 00:29:25.609

Okay, and then the next question is lock. So because we was mentioned about this whole controller should be under the locks, but his question is, is that correct or not?

193 "Raghu Chereddy" (2182419456)

00:29:25.609 --> 00:29:29.941

Yeah, again this is a question for Akshay.

194 "Mingchieh Wang" (2508059648)

00:29:29.941 --> 00:29:31.589

Okay PL.

195 "Raghu Chereddy" (2182419456)

00:29:31.589 --> 00:29:36.061

Pmiss where this actually should be.

196 "Mingchieh Wang" (2508059648)

00:29:36.061 --> 00:30:06.846

Okay sure Nice one is here asking if the if user navigate here, is there any, is there a need or update that oh ok we I think we already.

197 "Raghu Chereddy" (2182419456)

00:30:06.846 --> 00:30:09.121

Talking we discussed about this one.

198 "Mingchieh Wang" (2508059648)

00:30:09.121 --> 00:30:11.390

Not hover but click.

199 "Raghu Chereddy" (2182419456)

00:30:11.390 --> 00:30:12.971

Click yes.

200 "Mingchieh Wang" (2508059648)

00:30:12.971 --> 00:30:31.109

Yes, because when user hover in between a table underneath switch in

between, they, their eyes will be ready. Okay. We already confirmed.

201 "Mingchieh Wang" (2508059648)

00:30:31.109 --> 00:30:37.671

Yeah, these show the date event.

202 "Raghu Chereddy" (2182419456)

00:30:37.671 --> 00:30:44.287

Correct. Yeah.

203 "Mingchieh Wang" (2508059648)

00:30:44.287 --> 00:30:58.688

Okay, I think we're good for now. Yep, so it will be another, will you like to join pm's meeting tomorrow or are you good with that?

204 "Raghu Chereddy" (2182419456)

00:30:58.688 --> 00:31:02.847

I, I can join if if needed.

205 "Mingchieh Wang" (2508059648)

00:31:02.847 --> 00:31:10.461

Okay, I will have you. Who else should I invite? Akshay and.

206 "Raghu Chereddy" (2182419456)

00:31:10.461 --> 00:31:12.387

Right.

207 "Mingchieh Wang" (2508059648)

00:31:12.387 --> 00:31:15.487

Thank you.

208 "Raghu Chereddy" (2182419456)

00:31:15.487 --> 00:31:18.802

That's my manager.

209 "Mingchieh Wang" (2508059648)

00:31:18.802 --> 00:31:23.333

Right. Would you mind ping me the phone because I actually.

210 "Raghu Chereddy" (2182419456)

00:31:23.333 --> 00:31:30.371

I'll just send you the ID. Sure.

211 "Mingchieh Wang" (2508059648)

00:31:30.371 --> 00:31:48.960

Okay, sure. I'll do that. Thank you so much last let me update what I have today and then check with tomorrow. Okay, sure. Thank you. Bye.

Thank you.
