

WEBVTT

1 "Mingchieh Wang" (2857342464)

00:00:00.000 --> 00:00:13.798

Yeah Roma, I have a question. You mentioned you have this one update, right? So this should be from you, right?

2 "Ramana Polamarasetti" (2278075904)

00:00:15.179 --> 00:00:22.974

No, NO, I actually added that in the comment. I I didn't update them directly.

3 "Mingchieh Wang" (2857342464)

00:00:22.974 --> 00:00:27.559

In the comments. There was a comment you added.

4 "Ramana Polamarasetti" (2278075904)

00:00:27.559 --> 00:00:33.152

Asking me to provide input, so I just.

5 "Mingchieh Wang" (2857342464)

00:00:33.152 --> 00:00:50.533

Okay, I got it. I see. Oh yeah, yeah. Okay. I'm gonna do updates later today, but thank you. Yeah, sure. Okay. No one. 4 min left.

6 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:00:50.533 --> 00:00:53.756

Can we can start get started.

7 "Mingchieh Wang" (2857342464)

00:00:53.756 --> 00:01:04.621

Okay, so thank you for your join today. We're gonna talk about the V smart. Yeah, so.

8 "Mingchieh Wang" (2857342464)

00:01:05.477 --> 00:01:39.940

Oh yeah. So today we're going to talk about the EC review. The concept was to provide a clear data so the IT person when when people see the site, all the sites don't, right? They want to figure out what is going on, the traffic issue or any other issues. So we have the original, they have to go through sixties, check the events that was hundreds different events and then.

9 "Mingchieh Wang" (2857342464)

00:01:39.940 --> 00:01:42.150

And.

10 "Mingchieh Wang" (2857342464)

00:01:42.150 --> 00:02:02.150

The original, they come here and check the events, right? And then

there's so many issues not related with the and then they have to take a look and figure it out. It usually take one or two days. So now we wanted to present a new solution to face the issues.

11 "Mingchieh Wang" (2857342464)

00:02:02.150 --> 00:02:23.580

So with our new designs, the entry point will remain the same. User coming to the device and then choose the device and then they will go landing to the new three 60. Nothing gonna be changed. This is already on 26th.

12 "Mingchieh Wang" (2857342464)

00:02:23.580 --> 00:02:40.650

Wow. So the new page we have is on the locks, ok? On the locks, everything here because vsmart is the virtual machines. So everything's on the left hand side that was the machines device.

13 "Mingchieh Wang" (2857342464)

00:02:40.650 --> 00:03:02.179

Informations and then on the left, right hand side, we gonna use the ok when and what subject and what subject details, so they can 1 min to figure out the issues. So that was from one to two days, now it's just 1 min. Let's see how it works.

14 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:03:02.179 --> 00:03:05.631

So you're calling that as OMP statistics?

15 "Mingchieh Wang" (2857342464)

00:03:05.631 --> 00:03:06.638

But one.

16 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:03:06.638 --> 00:03:17.408

No, I see. So you're calling, you said we we smart, but here you are directly taking them to OMP statistics?

17 "Raghu Chereddy" (4206403072)

00:03:17.408 --> 00:03:30.148

These are OMP only related ones. The CPU memory is not the CPU memory. It is OMP CPU memory.

18 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:03:30.148 --> 00:03:45.851

Okay, what is sorry to ask, but what is OMP? V smart, it said controller, right? So ok OMP is a process on the V smart.

19 "Raghu Chereddy" (4206403072)

00:03:45.851 --> 00:03:51.115

Okay, that is responsible for distributing the routes for all the

devices.

20 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:03:51.115 --> 00:03:53.313
Oh.

21 "Raghu Chereddy" (4206403072)
00:03:53.313 --> 00:03:54.839
Okay.

22 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:03:54.839 --> 00:04:00.228
Okay ok so ok so customers would know what is OMP.

23 "Mingchieh Wang" (2857342464)
00:04:00.228 --> 00:04:01.514
And.

24 "Akshay Kaul" (486854144)
00:04:01.514 --> 00:04:02.955
Yes.

25 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:04:02.955 --> 00:04:04.576
Customer like.

26 "Akshay Kaul" (486854144)
00:04:04.576 --> 00:04:09.727
So in general, right, in the SD WAN solution is the overlay management protocol.

27 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:04:09.727 --> 00:04:11.117
It's it's.

28 "Akshay Kaul" (486854144)
00:04:11.117 --> 00:04:28.979
That's used right for every, every customer knows what OMP is. Okay.
But as OMP is just a process and that's the most critical process on vsmarts that is needed for troubleshooting purposes, right? If, if you have.

29 "Akshay Kaul" (486854144)
00:04:28.979 --> 00:04:52.875
Issues going on in the network, right? So that's why this is kind of being bubbled up. All of this information is available within vmanage. It's just like it's scattered in different places, right? You and, and you don't get like a process level utilization, you just get like a overall CPU utilization, so this is just to show this to the user directly instead of going to different.

30 "Mingchieh Wang" (2857342464)

00:04:52.875 --> 00:04:53.920

Cases.

31 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:04:53.920 --> 00:04:57.628

Okay. But why are we calling it statistics?

32 "Akshay Kaul" (486854144)

00:04:57.628 --> 00:05:09.212

Right, because it is a collection of different things that's the usage of process. It's also events. So we couldn't call it just events or just.

33 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:05:09.212 --> 00:05:11.835

So.

34 "Akshay Kaul" (486854144)

00:05:11.835 --> 00:05:17.273

And this is an overview dashboard for OMP process kind of thing then.

35 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:05:17.273 --> 00:05:44.189

Okay. Okay ok then but because we have ok OMP statistics. Okay, so here you are showing the OMP pass process usage ok and what is the next one EE events based on selection?

36 "Akshay Kaul" (486854144)

00:05:44.189 --> 00:05:50.907

Yep. So maybe, maybe before that, right, let me talk about the graph as well, right?

37 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:05:50.907 --> 00:05:53.794

But.

38 "Mingchieh Wang" (2857342464)

00:05:53.794 --> 00:06:12.739

So when user come in, they will figure out, ok, when and what time is the cause of the issues. User can be able to hover over each of them, right? And then show them what's the totals omps CPU was CPU.

39 "Mingchieh Wang" (2857342464)

00:06:12.739 --> 00:06:34.014

Memories are being increased and then they will follow, ok, this 08:00, so they're gonna see click on the air clock, click here and A o'clock all the event will display in the table and then they can take a look, ok, air clock events on policy that 08:00.

40 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:06:34.014 --> 00:06:35.710

Is selected to the user.

41 "Mingchieh Wang" (2857342464)

00:06:35.710 --> 00:06:42.971

Okay, so, when user click and then the table will refresh.

42 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:06:42.971 --> 00:06:53.064

No table will fresh but I don't know when whether I clicked on 08:00, so you don't have a visual indicator that I'm selecting 08:00. Usually graphs have a selection kind of thing.

43 "Akshay Kaul" (486854144)

00:06:53.064 --> 00:07:03.434

So it's supposed to I think had mentioned that they have a similar thing on analytics as well like if you click on the thing, everything else becomes dark and this kind of.

44 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:07:03.434 --> 00:07:08.251

We should have some indication that you selected that point, right?

45 "Akshay Kaul" (486854144)

00:07:08.251 --> 00:07:14.316

Yeah, so I think Venkat mentioned it is possible I don't know if that can be done in the figma, but Venkat said that you.

46 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:07:14.316 --> 00:07:16.098

Do it.

47 "Mingchieh Wang" (2857342464)

00:07:16.098 --> 00:07:17.789

One from.

48 "Akshay Kaul" (486854144)

00:07:17.789 --> 00:07:44.828

So before that, right, before, like, let's talk about the 1st graph only, right? 1st, just maybe go over what those lines are, and maybe one question I had was right, these lines we have for the average, right? They would not be a straight line, right? They would also be kind of be similar to the usage, right?

49 "SJC24-2-TR25/default" (3225636864)

00:07:45.350 --> 00:07:46.397

CPU.

50 "Raghu Chereddy" (4206403072)
00:07:46.397 --> 00:07:47.916
Yeah so.

51 "Raghu Chereddy" (4206403072)
00:07:50.309 --> 00:07:56.928
I think it's it probably straight is average across that window, the time window we are selecting.

52 "Akshay Kaul" (486854144)
00:07:56.928 --> 00:07:58.589
So it would.

53 "Ramana Polamarasetti" (2278075904)
00:07:58.589 --> 00:08:00.935
This rate.

54 "Raghu Chereddy" (4206403072)
00:08:00.935 --> 00:08:06.494
Yeah, my understanding. Is that correct? Yeah, yeah.

55 "Ramana Polamarasetti" (2278075904)
00:08:06.494 --> 00:08:17.629
Has to be straight only like we're basically showing over that period of time what is the average usage.

56 "Raghu Chereddy" (4206403072)
00:08:17.629 --> 00:08:20.032
The other way would be yeah.

57 "Akshay Kaul" (486854144)
00:08:20.032 --> 00:08:21.211
I mean.

58 "Raghu Chereddy" (4206403072)
00:08:21.211 --> 00:08:27.297
We can let's say we can average up to 01:00 every 10 min increments and show it there.

59 "Akshay Kaul" (486854144)
00:08:27.297 --> 00:08:40.228
You know it has to match the times that you are plotting already, right? You can't do different things for different parameters, right? Like if you are.

60 "Mingchieh Wang" (2857342464)
00:08:40.228 --> 00:08:40.965
Yeah, that's.

61 "Akshay Kaul" (486854144)

00:08:40.965 --> 00:08:43.167

Correct.

62 "Raghu Chereddy" (4206403072)

00:08:43.167 --> 00:08:49.671

I think we can just, yeah, that's that's a good point. I had the same doubt and.

63 "Akshay Kaul" (486854144)

00:08:49.671 --> 00:09:03.433

Because I had assumed that this would not be a straight line. It's just for data purposes we had depicted it to be this. But if it's a straight line, then I don't think it's needed to be shown there. But if you can confirm that this would.

64 "Raghu Chereddy" (4206403072)

00:09:03.433 --> 00:09:04.548

The.

65 "Akshay Kaul" (486854144)

00:09:04.548 --> 00:09:08.136

Kind of.

66 "Raghu Chereddy" (4206403072)

00:09:08.136 --> 00:09:15.107

Starting, you know, that from zero average until you know.

67 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:09:15.107 --> 00:09:15.997

The.

68 "Raghu Chereddy" (4206403072)

00:09:15.997 --> 00:09:18.587

Basically, the dot.

69 "Akshay Kaul" (486854144)

00:09:18.587 --> 00:09:21.192

The graph?

70 "Raghu Chereddy" (4206403072)

00:09:21.192 --> 00:09:27.812

So e.g. the first is at one 01:00, so basically zero to 01:00, we show that.

71 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:09:27.812 --> 00:09:28.849

One.

72 "Raghu Chereddy" (4206403072)

00:09:28.849 --> 00:09:34.640

Then the second.is at two. So zero to two app.

73 "Raghu Chereddy" (4206403072)

00:09:35.557 --> 00:09:37.986

Or 122.

74 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:09:37.986 --> 00:09:38.958

Bridge.

75 "Akshay Kaul" (486854144)

00:09:38.958 --> 00:09:42.269

Yeah, I mean I would think that's how it would be.

76 "Raghu Chereddy" (4206403072)

00:09:42.269 --> 00:09:44.734

Righty?

77 "Akshay Kaul" (486854144)

00:09:44.734 --> 00:09:45.788

So.

78 "SJC24-2-TR25/default" (3225636864)

00:09:45.788 --> 00:09:46.468

So.

79 "Akshay Kaul" (486854144)

00:09:46.468 --> 00:10:03.136

Because that's how they would know that it's going beyond the average rate, so so maybe in your figma, right? The dotted lines also need to be like they will they will not be straight lines. They, they are not like.

80 "Akshay Kaul" (486854144)

00:10:03.136 --> 00:10:11.010

The Guardrail feature or the threshold, right? It's not gonna be a straight line. It's gonna change every.

81 "Mingchieh Wang" (2857342464)

00:10:11.010 --> 00:10:11.969

Few.

82 "Akshay Kaul" (486854144)

00:10:11.969 --> 00:10:13.438

The average, yeah.

83 "Mingchieh Wang" (2857342464)

00:10:13.438 --> 00:10:16.069

Just a solid.

84 "Akshay Kaul" (486854144)
00:10:16.069 --> 00:10:18.795
Talent.

85 "Mingchieh Wang" (2857342464)
00:10:18.795 --> 00:10:22.588
Is that the only colored colored? Not that.

86 "Raghu Chereddy" (4206403072)
00:10:22.588 --> 00:10:24.071
About that.

87 "Ramana Polamarasetti" (2278075904)
00:10:24.071 --> 00:10:26.634
I'm sorry I didn't.

88 "Mingchieh Wang" (2857342464)
00:10:26.634 --> 00:10:29.989
Okay, so let me show you here.

89 "Akshay Kaul" (486854144)
00:10:29.989 --> 00:10:41.471
Yeah. No, NO NO. So it should be dotted, but what I'm saying it's not a straight line, like it would not be 60 and 40. It would be a similar line like you have the solid line, like it would go up and.

90 "Mingchieh Wang" (2857342464)
00:10:41.471 --> 00:10:58.176
Okay, got it. Got it got it that was up until ok yeah sure Do you think that will be too much wavy? People will be really hard to see.

91 "Akshay Kaul" (486854144)
00:10:58.176 --> 00:11:04.093
I mean, it can be wavy right then.

92 "Mingchieh Wang" (2857342464)
00:11:04.093 --> 00:11:05.629
Totally I can try.

93 "Akshay Kaul" (486854144)
00:11:05.629 --> 00:11:21.791
I mean it could be as wavy as the other client, right? I mean, average would be an average of the utilization if we are seeing the other one is really when this one will be really.

94 "Mingchieh Wang" (2857342464)
00:11:21.791 --> 00:11:24.713
Yep. Got it.

95 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:11:24.713 --> 00:11:33.856

Why why do we export export at each level? So you want to export the.

96 "Akshay Kaul" (486854144)

00:11:33.856 --> 00:11:50.739

So, today in in the troubleshooting pages or sorry, these monitoring pages, we have graphs on the top and then there is a table, right?

When you do an export, it just exports the graph.

97 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:11:50.739 --> 00:11:53.509

So it only exports the graph but not the table.

98 "Akshay Kaul" (486854144)

00:11:53.509 --> 00:12:24.872

Yes, so the requirement is that you should be able to export everything, and I would think, when you do an export, it's showing you like if you export the table on the top, it's just showing you whatever is sorry if you export the graph on the top, it's just showing you those parameters, right? Which are there in the graph, but the export of the table can have a lot of more stuff, right? So I think it makes sense in keeping them separate.

99 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:12:24.872 --> 00:12:32.936

So when we export how the CSV will feel like is like timestamp to CPU memory usage.

100 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:12:33.757 --> 00:12:36.550

Yeah.

101 "Akshay Kaul" (486854144)

00:12:36.550 --> 00:12:42.916

I I think so, I've not looked at it recently, so I don't remember, but if you have a vmanage, you can check it.

102 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:12:42.916 --> 00:12:52.669

No, but but again that's fine with me, but see the bottom right even based on selection and graph are the same, right?

103 "Akshay Kaul" (486854144)

00:12:52.669 --> 00:12:54.010

No.

104 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:12:54.010 --> 00:13:06.377

Why not? No, that bottom chart and the table, right? It is an aggregation of the I'm assuming that chart above the table is an

aggregation of the events.

105 "Akshay Kaul" (486854144)
00:13:06.377 --> 00:13:10.049
Yes.

106 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:13:10.049 --> 00:13:22.317
So then why do we need two exports? It's a different representation of the same table, right? Unless we say export, we.

107 "Akshay Kaul" (486854144)
00:13:22.317 --> 00:13:30.315
Right now that one is a number of events and yeah, I think we can remove it from the middle one.

108 "Mingchieh Wang" (2857342464)
00:13:30.315 --> 00:13:33.434
Remove that from the middle one, yeah.

109 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:13:33.434 --> 00:13:40.515
That export you should remove? That is a yeah.

110 "Akshay Kaul" (486854144)
00:13:40.515 --> 00:13:45.513
Yeah, the other thing is I don't think the title should be exp events based on select.

111 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:13:45.513 --> 00:13:54.217
Yeah, NO, it should not yeah even yeah it should be not the event payroll selection, correct?

112 "Mingchieh Wang" (2857342464)
00:13:54.217 --> 00:13:58.179
So you mean this one here?

113 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:13:58.179 --> 00:14:17.695
Yeah, see that is the events, right? Why we want to call it based on selection does not click anything, you'll get all the events. If the user clicks, then it's a filtered view and we are also, we just talked like said they will show that selection right parameter, then you don't need that, right?

114 "Mingchieh Wang" (2857342464)
00:14:17.695 --> 00:14:19.833
Yeah, just event.

115 "Akshay Kaul" (486854144)
00:14:19.833 --> 00:14:22.817
Yeah, but is it, ok.

116 "Mingchieh Wang" (2857342464)
00:14:22.817 --> 00:14:28.674
Good catch.

117 "Akshay Kaul" (486854144)
00:14:28.674 --> 00:14:33.854
Yeah, but I mean just events, is that a good enough title for this?

118 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:14:33.854 --> 00:14:36.829
I don't know which one would be that, yeah.

119 "Mingchieh Wang" (2857342464)
00:14:36.829 --> 00:14:43.395
So Rahul, what will be the beta title to describe this chart?

120 "Raghu Chereddy" (4206403072)
00:14:43.395 --> 00:14:51.551
There are events, what's the right name? That's.

121 "Akshay Kaul" (486854144)
00:14:51.551 --> 00:14:52.239
Okay.

122 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:14:52.239 --> 00:14:56.029
You want, I don't know you are you're saying any OMP process OMP.

123 "Raghu Chereddy" (4206403072)
00:14:56.029 --> 00:14:57.092
Davids.

124 "Akshay Kaul" (486854144)
00:14:57.092 --> 00:15:01.531
Yeah, but it's also control connection and policy.

125 "Raghu Chereddy" (4206403072)
00:15:01.531 --> 00:15:02.559
Incorrect.

126 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:15:02.559 --> 00:15:04.551
Yeah, ok.

127 "Akshay Kaul" (486854144)
00:15:04.551 --> 00:15:08.089

See I guess let's keep it events for now. Yeah.

128 "Mingchieh Wang" (2857342464)
00:15:08.089 --> 00:15:09.468
Okay.

129 "Akshay Kaul" (486854144)
00:15:09.468 --> 00:15:10.436
Okay, sure.

130 "Mingchieh Wang" (2857342464)
00:15:10.436 --> 00:15:14.954
Events for now. Rahul let me know if you want me to upload.

131 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:15:14.954 --> 00:15:20.353
Yeah, you can remove the yeah you already made a comment for export, ok.

132 "Mingchieh Wang" (2857342464)
00:15:20.353 --> 00:15:27.231
Oh, because all of the page, not even here, if I modify here and then I'm gonna have to rememb.

133 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:15:27.231 --> 00:15:37.514
Got it got it NO problem yeah ok what about yeah I think actually you were saying your comments about colors.

134 "Akshay Kaul" (486854144)
00:15:37.514 --> 00:15:40.232
Right? Yeah, go ahead.

135 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:15:40.232 --> 00:15:45.035
But I thought will this be addressable for colorblind people? Is that the.

136 "Akshay Kaul" (486854144)
00:15:45.035 --> 00:16:10.335
These are all migrate approved colors, right? So I'm assuming everything there is accessibility stamp, but I think we should not have like eight different colors on this page. I I remembering you're using the secondary color palette or something right for the middle one. I think let's use the same primary one, right? We don't need to have a rainbow on this page.

137 "Mingchieh Wang" (2857342464)
00:16:10.335 --> 00:16:16.031
Okay, I Okay, I see. Just send color on top.

138 "Akshay Kaul" (486854144)

00:16:16.031 --> 00:16:29.854

Yeah, I mean, why expose all the colors, right? The different graphs, they are not mix and match anyways, right? So it's going to be different. Narendra did.

139 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:16:29.854 --> 00:16:33.414

You agreed.

140 "Akshay Kaul" (486854144)

00:16:33.414 --> 00:16:45.355

Yeah, because that's the some that's the 1st thing anyone who will look at this will point out oh we have not seen these colors on vmanage looks fancy but not an enterprise product friend.

141 "Mingchieh Wang" (2857342464)

00:16:45.355 --> 00:16:53.090

But the color will exactly same here. Blue, green, and those.

142 "Akshay Kaul" (486854144)

00:16:53.090 --> 00:16:54.067

That's ok.

143 "Mingchieh Wang" (2857342464)

00:16:54.067 --> 00:17:00.030

Not the yellow. Yellow is the warning, so not starting with yellow, ok?

144 "Akshay Kaul" (486854144)

00:17:00.030 --> 00:17:11.912

Okay, I mean green also is kind of a status rate so you can pick the alternate palette, but yeah pick something which is the primary palette we choose at other places.

145 "Mingchieh Wang" (2857342464)

00:17:11.912 --> 00:17:19.079

Okay.

146 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:17:19.079 --> 00:17:20.095

Okay.

147 "Mingchieh Wang" (2857342464)

00:17:20.095 --> 00:17:23.900

November how about the detail?

148 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:17:23.900 --> 00:17:26.718

No I got it, so these are events, right? Okay.

149 "Akshay Kaul" (486854144)

00:17:26.718 --> 00:17:38.437

And do we want the timestamp to be the 1st one or cause usually timestamps, I think the ordering is wrong, timestamps.

150 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:17:38.437 --> 00:17:43.588

Why yeah timestamp oh yeah correct that's a good point. Why is timestamp then?

151 "Akshay Kaul" (486854144)

00:17:43.588 --> 00:17:52.640

And details and events are kind of, later, right?

152 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:17:52.640 --> 00:18:05.692

No, I think maybe event is I don't know if evening site name, system IP, those should be beginning, NO, but this is with respect to event, right?

153 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:18:06.366 --> 00:18:08.355

Yeah, but if you.

154 "Akshay Kaul" (486854144)

00:18:08.355 --> 00:18:14.793

Like events are mostly based on time, right? Like time should be the.

155 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:18:14.793 --> 00:18:20.316

The timestamp I agree, what about the other columns? Is that ok?

156 "Akshay Kaul" (486854144)

00:18:20.316 --> 00:18:38.020

I think, I think for identification purposes, right? I think timestamp system IP and site name should be 1st. I think event and details should mostly be the last ones.

157 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:18:38.020 --> 00:18:51.777

I don't know if even details is last time right then how do they know which event it is? Oh, you want because maybe the more important information is event, right?

158 "Akshay Kaul" (486854144)

00:18:51.777 --> 00:19:03.539

Yes, let me check something.

159 "Akshay Kaul" (486854144)

00:19:03.539 --> 00:19:20.095

So even today we have event name as the event time is the 1st even today, right? I think usually time is shown 1st.

160 "Raghu Chereddy" (4206403072)

00:19:20.095 --> 00:19:38.236

Yeah, I think actually event for me looks more reasonable because that is our primary cause, right? And we are showing next to what time it actually happened and followed by the details.

161 "Raghu Chereddy" (4206403072)

00:19:38.236 --> 00:19:42.115

Our anchor point is the event itself.

162 "Akshay Kaul" (486854144)

00:19:42.115 --> 00:19:58.789

No, NO, that, that is I I see what you're saying, but the thing is like if the table, event table is usually like time sorted, right? If you go to other event tables in we manage, right? You always have the timest.

163 "Akshay Kaul" (486854144)

00:19:58.789 --> 00:20:11.174

As the 1st thing, right? Because events can be like we don't know what logic you're following in showing the events, right? Is it just sorted on the basis of.

164 "Akshay Kaul" (486854144)

00:20:11.776 --> 00:20:14.228

I don't know.

165 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:20:14.228 --> 00:20:30.717

Yeah I think what actually is trying to say is that you might be interested in the latest event right then in that time. I'm also seeing we are, we are using the event time as the 1st one.

166 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:20:33.369 --> 00:20:36.766

We don't need host name because this is already there.

167 "Mingchieh Wang" (2857342464)

00:20:36.766 --> 00:20:38.160

One.

168 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:20:38.160 --> 00:20:39.227

System IP.

169 "Raghu Chereddy" (4206403072)

00:20:41.349 --> 00:20:47.654

So yeah we had these comments also last time when the host name need to be removed.

170 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:20:47.654 --> 00:20:51.453

The personality is always.

171 "Raghu Chereddy" (4206403072)

00:20:51.453 --> 00:20:54.756

The type also appear type also not required.

172 "Akshay Kaul" (486854144)

00:20:57.753 --> 00:21:08.031

No, NO, that is all details, right? So did, did you share it with the Mink, like what these details would look like?

173 "Raghu Chereddy" (4206403072)

00:21:08.031 --> 00:21:08.707

Okay.

174 "Mingchieh Wang" (2857342464)

00:21:08.707 --> 00:21:11.595

Okay.

175 "Raghu Chereddy" (4206403072)

00:21:11.595 --> 00:21:18.437

Is that part of the data you we shared?

176 "Ramana Polamarasetti" (2278075904)

00:21:18.437 --> 00:21:25.888

No naturally I only gave the delta.

177 "SJC24-2-TR25/default" (3225636864)

00:21:25.888 --> 00:21:27.033

Because.

178 "Akshay Kaul" (486854144)

00:21:27.033 --> 00:21:28.989

Okay, so I think.

179 "Akshay Kaul" (486854144)

00:21:28.989 --> 00:21:49.915

This needs to show something relevant, right? We can't just have placeholder details so let's populate this with something which is which would be like realistically seen, right? You know, what kind of details are you planning to send to be managed which it will show so like.

180 "Akshay Kaul" (486854144)

00:21:49.915 --> 00:21:55.173

Let's put the sum, put something realistic in here.

181 "Ramana Polamarasetti" (2278075904)

00:21:55.173 --> 00:21:57.093

Yeah.

182 "SJC24-2-TR25/default" (3225636864)

00:21:57.093 --> 00:21:57.852

Okay.

183 "Ramana Polamarasetti" (2278075904)

00:21:57.852 --> 00:22:10.047

Here the yeah for some of them right those may not be applicable I mean like it's the same peer type. So we don't need to show that.

184 "Raghu Chereddy" (4206403072)

00:22:10.047 --> 00:22:10.593

Again.

185 "Mingchieh Wang" (2857342464)

00:22:11.135 --> 00:22:12.875

Okay.

186 "Akshay Kaul" (486854144)

00:22:12.875 --> 00:22:13.417

Yes.

187 "Ramana Polamarasetti" (2278075904)

00:22:13.417 --> 00:22:16.575

No, NO, not that in the in the details.

188 "Mingchieh Wang" (2857342464)

00:22:16.575 --> 00:22:17.571

Yeah.

189 "SJC24-2-TR25/default" (3225636864)

00:22:17.571 --> 00:22:18.655

Oh ok.

190 "Mingchieh Wang" (2857342464)

00:22:18.655 --> 00:22:26.950

Yeah it it's too much. So can I remove this one or just peer type here.

191 "Akshay Kaul" (486854144)

00:22:26.950 --> 00:22:45.988

It does not matter what you do here, right? We need to show something that the device will send to be managed and it will show here, right?

Even if you say ABC here, it's not like abc's going to show up in the logs, right? We want to see what, what will actually show, right? Is it showing something relevant or is it.

192 "Akshay Kaul" (486854144)

00:22:46.556 --> 00:23:00.553

Sending my name in the logs, we want to see just so how it would be consumable so is that something you can share without before the exact demo on Tuesday? Because.

193 "Ramana Polamarasetti" (2278075904)

00:23:00.553 --> 00:23:04.028

This needs to be sure yeah yeah I can I can.

194 "Akshay Kaul" (486854144)

00:23:04.028 --> 00:23:16.675

Sure ok so maybe put put something which is an actual output for all these events. So, so it's easy to understand or consume what is being shown.

195 "Mingchieh Wang" (2857342464)

00:23:16.675 --> 00:23:20.233

Demo is tomorrow.

196 "Akshay Kaul" (486854144)

00:23:20.233 --> 00:23:22.151

Wait for.

197 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:23:22.151 --> 00:23:24.091

Yeah it's tomorrow.

198 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:23:25.988 --> 00:23:33.596

Yeah, I saw it tomorrow actually. I never saw this, that's why actually I don't like I want to review this. Yeah.

199 "Akshay Kaul" (486854144)

00:23:33.596 --> 00:23:34.657

Yeah.

200 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:23:34.657 --> 00:23:54.376

Like maybe I'll give it to yeah you can give it to me so maybe see again the question will come right definitely what actually is also asking, right? One question will come is why is this table different than other table orders?

201 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:23:54.376 --> 00:24:11.489

Right? Because if you go to events and alarms, right, we are showing event times, host name, time stamp, all of that right? Why we want to change that? Event in audit log also I see timestamp is the 1st one.

202 "Akshay Kaul" (486854144)

00:24:11.489 --> 00:24:14.155

Is it called timestamp or is it called event type.

203 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:24:14.155 --> 00:24:24.828

In event events it's called event time in order it's called timestamp. I think we are inconsistent there, but I think even time is better event time is might be better.

204 "Mingchieh Wang" (2857342464)

00:24:27.911 --> 00:24:39.994

Showing, I agree with you, this table is totally different with others the the sequence, ok? The sequence. We always start with a site host names.

205 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:24:39.994 --> 00:24:55.109

I mean, see the events table, right? Okay. See, what I'm trying to get to is right see you are saying that, hey, we already have events. This dashboard is the.

206 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:24:55.109 --> 00:25:18.156

What you are trying to make it easy for the customer to find that, right? So if you go to the top there's a left side events from there also you can do, right? If customer is already used to that, why you want to change that information here? That's what I'm trying to say. Go to NO NO yeah like like if you have a testbed, right? Can I.

207 "Mingchieh Wang" (2857342464)

00:25:18.156 --> 00:25:23.420

Yeah, please. I lost. Yeah, NO problem.

208 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:25:23.420 --> 00:25:42.747

Okay, so I mean this is what you are telling, right? Okay, you're seeing my screen. See this we already have events, audit logs ACL logs and traffic logs, right? Here only you're going to add a of course you're not you're going to do it in the device three 60 page, not here, but.

209 "Akshay Kaul" (486854144)

00:25:42.747 --> 00:25:51.300

But even if you go to device three 60 yeah yeah.

210 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:25:51.300 --> 00:26:01.597

Okay, where events? Yeah, if events is there right we yeah maybe we should show the same same columns.

211 "Mingchieh Wang" (2857342464)

00:26:01.597 --> 00:26:07.395

Okay, I'm gonna to take screenshots, but see.

212 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:26:07.395 --> 00:26:25.969

I mean same order, right? That way if some of the things are not applicable at least we give a consistent ideal because I I, I mean I understand what Ramana is coming to say that, hey, these are different type of events, but is it more event time that is relevant to the customer or versus type of the event?

213 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:26:25.969 --> 00:26:40.092

Because everything is visible in the same screen. We are not going away. I don't know which would be I'm assuming this would be the order, but yeah, you guys can comment.

214 "Akshay Kaul" (486854144)

00:26:43.330 --> 00:26:49.113

Yeah, I think we should stick to this order.

215 "Mingchieh Wang" (2857342464)

00:26:49.113 --> 00:26:53.599

Okay, can I share my screen? I can side by side.

216 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:26:53.599 --> 00:26:54.758

Yeah.

217 "Akshay Kaul" (486854144)

00:26:54.758 --> 00:26:55.294

Changed.

218 "Mingchieh Wang" (2857342464)

00:26:55.294 --> 00:27:00.892

I see my screen now, see tapping.

219 "Akshay Kaul" (486854144)

00:27:00.892 --> 00:27:03.076

Here.

220 "Raghu Chereddy" (4206403072)

00:27:03.076 --> 00:27:12.793

The event that we show below corresponds to the time that user selects

the board, right? In the graph.

221 "Akshay Kaul" (486854144)
00:27:12.793 --> 00:27:16.575
If they're if they do Yes.

222 "Raghu Chereddy" (4206403072)
00:27:16.575 --> 00:27:18.692
So in that case.

223 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:27:20.887 --> 00:27:22.470
It can be.

224 "Akshay Kaul" (486854144)
00:27:22.470 --> 00:27:28.832
In that case it even makes more sense to show time 1st, right? Because we are selecting on the basis of time.

225 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:27:33.579 --> 00:27:45.859
I mean I need to ask but usually the time can be a window or a point, right? That's also important, right? If you're selecting a time interval, right? Like from 08:00 to 09:00, then would you be interested in a.

226 "Akshay Kaul" (486854144)
00:27:46.967 --> 00:27:51.865
Oh, but that thing is only going to be a single click, right? So it's.

227 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:27:51.865 --> 00:27:53.792
It's ok. I don't know that.

228 "Akshay Kaul" (486854144)
00:27:53.792 --> 00:27:59.189
What else? I think it's going to show all the events before that time.

229 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:27:59.189 --> 00:28:04.389
I think.

230 "Mingchieh Wang" (2857342464)
00:28:05.531 --> 00:28:09.719
So are we gonna do match?

231 "SJC24-2-TR25/speaker_1" (3225636864_1)
00:28:09.719 --> 00:28:26.786
Yeah, do, do one thing, right? I would suggest right now said he will give you the data, right? Why don't you populate the data and then

right just say you you have any space like share it there, right? Then we can review that I know it's tomorrow.

232 "Akshay Kaul" (486854144)

00:28:26.786 --> 00:28:33.370

I think we are mostly done, right? So the 1st three columns would be event time.

233 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:28:36.880 --> 00:28:38.077

Source is not.

234 "Raghu Chereddy" (4206403072)

00:28:38.077 --> 00:28:38.656

Required.

235 "Ramana Polamarasetti" (2278075904)

00:28:38.656 --> 00:28:41.890

My hostname is not required, so second one will be.

236 "Akshay Kaul" (486854144)

00:28:41.890 --> 00:28:44.031

Event.

237 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:28:44.031 --> 00:28:47.812

Right? Because this is for VM only, this is for vsmart only.

238 "Akshay Kaul" (486854144)

00:28:47.812 --> 00:28:49.152

Right? No, NO worri.

239 "Akshay Kaul" (486854144)

00:28:51.493 --> 00:29:00.192

Right? No, NO, not just all devices, right? These events are happening on, right? Or or are these all showing.

240 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:29:00.192 --> 00:29:03.718

We select a particular.

241 "Mingchieh Wang" (2857342464)

00:29:03.718 --> 00:29:04.232

Smart right.

242 "Ramana Polamarasetti" (2278075904)

00:29:04.232 --> 00:29:09.693

So we are actually on a particular V smart, so hostname is all common for that.

243 "Akshay Kaul" (486854144)

00:29:09.693 --> 00:29:14.112

Okay, then even the system IP is common then, right?

244 "Ramana Polamarasetti" (2278075904)

00:29:14.112 --> 00:29:17.536

Okay so for the.

245 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:29:19.040 --> 00:29:22.233

Yeah, then site name will also be common. Yeah.

246 "Akshay Kaul" (486854144)

00:29:22.233 --> 00:29:24.793

Then all of these are not needed.

247 "Ramana Polamarasetti" (2278075904)

00:29:24.793 --> 00:29:30.395

No, NO NO NO. So for the control connection, when we say control connect.

248 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:29:30.395 --> 00:29:32.288

So.

249 "Ramana Polamarasetti" (2278075904)

00:29:32.288 --> 00:29:46.469

We are basically talking about the control connection towards a system IP. So here here in the event space, the host name is, on which we are seeing that.

250 "Ramana Polamarasetti" (2278075904)

00:29:46.469 --> 00:29:52.609

But again, the system IP is the peer system IP. We don't know.

251 "Akshay Kaul" (486854144)

00:29:52.609 --> 00:29:54.591

Which would be.

252 "Ramana Polamarasetti" (2278075904)

00:29:54.591 --> 00:29:56.549

The, which would be the.

253 "Raghu Chereddy" (4206403072)

00:29:56.549 --> 00:29:59.266

Remote system id.

254 "Akshay Kaul" (486854144)

00:29:59.266 --> 00:30:01.473

Yeah. The, the other control.

255 "Raghu Chereddy" (4206403072)

00:30:01.473 --> 00:30:02.151

No.

256 "Ramana Polamarasetti" (2278075904)

00:30:02.151 --> 00:30:05.371

Yeah, either controller or edge edge device.

257 "Akshay Kaul" (486854144)

00:30:05.371 --> 00:30:14.500

So then the host would like, do you know all the system IPs of your devices in the network? You don't write?

258 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:30:14.500 --> 00:30:16.356

Then you need a host name of that, right?

259 "Raghu Chereddy" (4206403072)

00:30:16.356 --> 00:30:17.573

Right, that's what.

260 "Akshay Kaul" (486854144)

00:30:17.573 --> 00:30:24.514

I was saying right system IP and host name, if we are saying system IP can be anything in the network, then the host name should be that.

261 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:30:24.514 --> 00:30:34.427

As well, right? Your your peer host name should come right from like I think I don't know what we are saying is maybe if you're saying that, hey, these are the events generated from your peer.

262 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:30:34.427 --> 00:30:45.053

Then you should get that details, right? System IP might be technical. Yeah, you may remember, you may not remember, right? 1st name is more identified.

263 "Akshay Kaul" (486854144)

00:30:45.053 --> 00:30:50.747

Right? Because we also added this host name column in the control connections.

264 "SJC24-2-TR25/default" (3225636864)

00:30:50.747 --> 00:30:51.493

The.

265 "Akshay Kaul" (486854144)

00:30:51.493 --> 00:31:01.894

A section on the left as well, right? It was a customer asked when they were saying hey we don't know what these IPs are. Can you make it more simple for us? So hostname is definitely needed.

266 "Mingchieh Wang" (2857342464)

00:31:01.894 --> 00:31:03.553

Okay.

267 "Ramana Polamarasetti" (2278075904)

00:31:03.553 --> 00:31:11.227

Yeah, then yeah, then I think yeah if if yeah customer asks for a particular thing, then yeah, we should.

268 "Akshay Kaul" (486854144)

00:31:11.227 --> 00:31:16.290

But it makes sens.

269 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:31:16.290 --> 00:31:17.412

So now. Yeah.

270 "Ramana Polamarasetti" (2278075904)

00:31:17.412 --> 00:31:22.534

I mean if in some other places they asked I mean here also they may face the same thing, right? So yeah.

271 "Akshay Kaul" (486854144)

00:31:22.534 --> 00:31:26.750

Yeah, but you agree, right? System IP is not ok.

272 "Raghu Chereddy" (4206403072)

00:31:26.750 --> 00:31:27.513

Okay.

273 "Mingchieh Wang" (2857342464)

00:31:27.513 --> 00:31:30.850

Can someone help me to organize one more time so.

274 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:31:30.850 --> 00:31:39.072

Use the same, use the same order, right? I think that's what we are trying to say, right? Okay. Yeah, now like now once.

275 "Akshay Kaul" (486854144)

00:31:39.072 --> 00:31:51.920

So 1st three would be the same and then you can have the event name or event type, right? Whatever you want to call it for the 1st column you have in the table below.

276 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:31:51.920 --> 00:31:57.793

Yeah, name I think name is the event name, I believe. Yeah, yeah.

277 "Mingchieh Wang" (2857342464)

00:31:57.793 --> 00:32:02.591

I don't see even name on tops.

278 "Ramana Polamarasetti" (2278075904)

00:32:02.591 --> 00:32:04.927

Yeah, so there.

279 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:32:04.927 --> 00:32:08.992

System IP name is the event name actually.

280 "Mingchieh Wang" (2857342464)

00:32:08.992 --> 00:32:11.616

Oh, event name here, ok.

281 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:32:11.616 --> 00:32:13.427

I believe so.

282 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:32:14.020 --> 00:32:16.795

Beep. Okay.

283 "Mingchieh Wang" (2857342464)

00:32:16.795 --> 00:32:20.828

Can I suggest something here?

284 "Raghu Chereddy" (4206403072)

00:32:20.828 --> 00:32:33.698

See now we are trying to change. Can we defer this until after your demo? There will be I'm sure there will be some comments or suggestions based on that we can incorporate or bring it here.

285 "Akshay Kaul" (486854144)

00:32:33.698 --> 00:32:35.591

Before what?

286 "Raghu Chereddy" (4206403072)

00:32:35.591 --> 00:32:47.037

Defer these changes until after the execs demo. There has there are going to be some suggestions, changes that probably needs to be done after that.

287 "Akshay Kaul" (486854144)

00:32:47.037 --> 00:33:11.711

No, but I mean that those suggestions would be independent of these,

right? There maybe other suggestions. They're not going to say that, use the wrong order, right? Maybe they will they will even miss it, right? So let's show them what like this is just a change in the order, right? So I don't think anyone will be the concern of fixing.

288 "Mingchieh Wang" (2857342464)

00:33:11.711 --> 00:33:18.426

Okay, what's this? It says component that who knows what's the.

289 "Akshay Kaul" (486854144)

00:33:19.131 --> 00:33:24.832

Component is, is actually the event name as well. We we don't need to.

290 "Mingchieh Wang" (2857342464)

00:33:25.951 --> 00:33:32.069

Check this one. Should we show this one? Is it.

291 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:33:32.069 --> 00:33:43.711

So that is I think because of the gap. Don't worry for you you should get full put full full component. I don't think.

292 "Ramana Polamarasetti" (2278075904)

00:33:43.711 --> 00:33:45.949

We we don't need that.

293 "Akshay Kaul" (486854144)

00:33:45.949 --> 00:34:03.437

So we don't need components so on other place, right? As I said, events has everything. So in events you get all kinds of events, right? So over there components are like, is this a security event if this is a controlled, right? Over here since we are only showing these kind of events, we don't need to add that.

294 "Mingchieh Wang" (2857342464)

00:34:03.437 --> 00:34:13.572

Yeah, ok. So we'll be even time host host name, system IP, event name security and detail.

295 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:34:13.572 --> 00:34:15.655

Severity is also.

296 "Akshay Kaul" (486854144)

00:34:15.655 --> 00:34:18.073

Something needed, right?

297 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:34:18.073 --> 00:34:25.471

I don't know the severity is coming if it is not. Severity might be

needed, you don't need severity.

298 "Akshay Kaul" (486854144)

00:34:25.471 --> 00:34:32.929

Yeah which are change events, right? So I'm assuming they would all be high severities anyways.

299 "Ramana Polamarasetti" (2278075904)

00:34:32.929 --> 00:34:39.034

Right? Yeah. Policy change is NO severity associated.

300 "Akshay Kaul" (486854144)

00:34:39.034 --> 00:34:39.552

Yeah.

301 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:34:39.552 --> 00:34:45.514

Okay or maybe we can bring additional columns if it makes.

302 "Ramana Polamarasetti" (2278075904)

00:34:45.514 --> 00:34:49.154

Correct, because we have other right like.

303 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:34:49.154 --> 00:34:53.648

Yeah, you guys can use that route received and PS.

304 "Raghu Chereddy" (4206403072)

00:34:53.648 --> 00:34:54.428

It's ready.

305 "Mingchieh Wang" (2857342464)

00:34:54.428 --> 00:34:56.573

Yeah. So router.

306 "Akshay Kaul" (486854144)

00:34:56.573 --> 00:34:58.699

Here.

307 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:34:58.699 --> 00:35:00.231

Yeah, years.

308 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:35:01.636 --> 00:35:05.320

Yeah, below below, right? After the the last three.

309 "Mingchieh Wang" (2857342464)

00:35:11.517 --> 00:35:13.257

And then.

310 "Akshay Kaul" (486854144)

00:35:16.614 --> 00:35:25.533

Okay, I need to drop off, these were the only changes we did, right?

For this feature, this is the only.

311 "SJC24-2-TR25/default" (3225636864)

00:35:25.533 --> 00:35:26.116

Thing right?

312 "Mingchieh Wang" (2857342464)

00:35:26.116 --> 00:35:47.930

Yeah, only this yes yes. Okay. So let me confirm, so router sends the routers received and peers, those three ok so remove the sign in NO NO longer needs somehow.

313 "Mingchieh Wang" (2857342464)

00:35:47.930 --> 00:35:50.540

Hey, that's it.

314 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:35:50.540 --> 00:35:53.356

Okay, thanks thanks Roma thanks.

315 "Mingchieh Wang" (2857342464)

00:35:53.356 --> 00:35:59.136

Sure, November I forgot, should we need severity?

316 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:35:59.136 --> 00:36:03.547

Yeah, I don't think so, yeah.

317 "Mingchieh Wang" (2857342464)

00:36:03.547 --> 00:36:06.426

Thank you. So Rama, please send me the data to.

318 "SJC24-2-TR25/default" (3225636864)

00:36:06.426 --> 00:36:07.233

Yeah.

319 "Ramana Polamarasetti" (2278075904)

00:36:07.233 --> 00:36:11.428

Yeah, I'll send it. I'll I'll come up with it right now and I'll send.

320 "Mingchieh Wang" (2857342464)

00:36:11.428 --> 00:36:16.447

Yeah, I sent the final review tomorrow for everybody.

321 "Mingchieh Wang" (2857342464)

00:36:16.990 --> 00:36:18.398

Thank you.

322 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:36:18.398 --> 00:36:23.972

Why we don't need site ID, site name, site ID here.

323 "Mingchieh Wang" (2857342464)

00:36:23.972 --> 00:36:26.107

Why we don't need side.

324 "Raghu Chereddy" (4206403072)

00:36:26.107 --> 00:36:41.582

Because we have to know which peer that site ID be which that peer where that's let me put it a different way. So the event that is coming from the peer to which site it belongs to that we need to know.

325 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:36:41.582 --> 00:36:45.594

Go ahead. I think.

326 "Raghu Chereddy" (4206403072)

00:36:45.594 --> 00:36:49.788

Yeah also where it is coming from.

327 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:36:49.788 --> 00:36:57.793

We don't need site ID. I think what we maybe we need host name, system IP, site name, because site ID.

328 "Ramana Polamarasetti" (2278075904)

00:36:57.793 --> 00:37:02.471

We are not there's nothing called site name, right?

329 "Raghu Chereddy" (4206403072)

00:37:02.471 --> 00:37:06.080

Right ID, Right ID only yeah.

330 "Mingchieh Wang" (2857342464)

00:37:07.118 --> 00:37:08.551

Sorry, I.

331 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:37:08.551 --> 00:37:22.154

No, I think I understand there is site ID at that like but what we also said like IP as well, right? The reason we are showing host name is because customers will not remember the.

332 "Raghu Chereddy" (4206403072)

00:37:22.154 --> 00:37:37.860

Narendra one thing see this IP, even though we provide the remote

system IP here, customers would do not know which site ID, site that system IP belong to.

333 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:37:37.860 --> 00:37:45.032

Okay you want site ID also to be shown that's what you're trying to say.

334 "Raghu Chereddy" (4206403072)

00:37:45.032 --> 00:37:46.275

Correctly.

335 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:37:46.275 --> 00:38:11.557

Yeah, that is fine because see I think only one practice we did earlier is right one customer feedback is we got is right hey for me I don't care site ID, show me site name which is more meaningful, but in because this is the events, if it makes sense to show site ID, yeah, it is we can we'll definitely show site ID and site name but we are hiding by default site ID, but in this case it is events, I think we can show that's ok.

336 "Raghu Chereddy" (4206403072)

00:38:11.557 --> 00:38:17.354

I just clarify one thing here. Does the site name here maps to your particular site.

337 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:38:17.354 --> 00:38:18.532

Right ID? Correct.

338 "Raghu Chereddy" (4206403072)

00:38:18.532 --> 00:38:20.314

Correct. But then in that case I.

339 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:38:20.314 --> 00:38:25.320

Name is good. Yeah, that's what that's it. Site name is the I mean.

340 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:38:25.320 --> 00:38:42.640

Username user given name for a site ID, right? So in manage we are trying to earlier we used to show site ID everywhere, but site ID is hundred, 200 500 700 or some random number like 3455, but you want to say it's a San Jose site, right? That's what.

341 "Raghu Chereddy" (4206403072)

00:38:42.640 --> 00:38:44.775

Okay then that is that is good enough.

342 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:38:44.775 --> 00:38:47.751

So we just. Okay.

343 "Mingchieh Wang" (2857342464)

00:38:47.751 --> 00:38:56.456

Alright, let me repeat. Event name, host name, system IP, site name.

Yes. Okay.

344 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:38:56.456 --> 00:38:59.812

Yeah. And then all these routes send peers.

345 "Mingchieh Wang" (2857342464)

00:38:59.812 --> 00:39:01.116

Yes yes.

346 "Raghu Chereddy" (4206403072)

00:39:01.116 --> 00:39:01.851

Yes yes.

347 "Ramana Polamarasetti" (2278075904)

00:39:01.851 --> 00:39:15.997

Yeah so for the site name actually, on the V smart, we don't know. We don't have that the mapping. We we only know site ID, so maybe on vmanage there is a config that it can.

348 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:39:15.997 --> 00:39:40.970

Yeah when we yeah we usually we give a site name but yeah if there is NO, when we onboard a device right in the quick connect we try to give a site name. But if you think that your site ID can also be there, we try to hide site ID by default show site name. When they click the settings icon, we can bring back.

349 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:39:40.970 --> 00:40:04.293

Additional columns. Okay yeah but if you think, yeah, that's ok. I think if you want to keep site ID also, that's what I was trying to say, right? If it is if you think that there can be scenarios where customers can, I mean we don't, this is not mandatory but we are trying to give site name. If they use site ID only then we can show site ID also.

350 "SJC24-2-TR25/speaker_1" (3225636864_1)

00:40:08.039 --> 00:40:10.310

Okay, sounds good guys.

351 "Ramana Polamarasetti" (2278075904)

00:40:10.310 --> 00:40:15.296

Thank you. Okay, yeah, thank you. Bye. Bye.
